

“Introduction to QC / QA Testing” is an introductory course designed to teach current CDOT / AASHTO test procedures used in the quality control and quality assurance of asphalt materials, and in the placement of asphalt pavement. This training is useful for both entry level technicians, who are preparing for asphalt technician certification, as well as for more seasoned technicians who may be re-entering the testing arena. Inspectors and Engineers, who desire more knowledge about testing procedures, how they are to be carried out during a paving project, and basic information on how the test results may affect the quality of the pavement, will benefit from this course.

The training course includes classroom instruction and hands-on experience in the laboratory, of four separate elements, offered in four separate one day periods. Participant may sign up for any or all the separate elements depending on the information desired.

Day 1: Covers the laydown testing procedures and corresponds with Level A certification.

Day 2: Covers laboratory testing procedures and corresponds with Level B certification.

Day 3: Covers volumetric, Lottman and stability testing procedures and corresponds with Level C.

Day 4: Covers aggregate properties testing and corresponds with Level E certification.
